

HOW TO READ IT

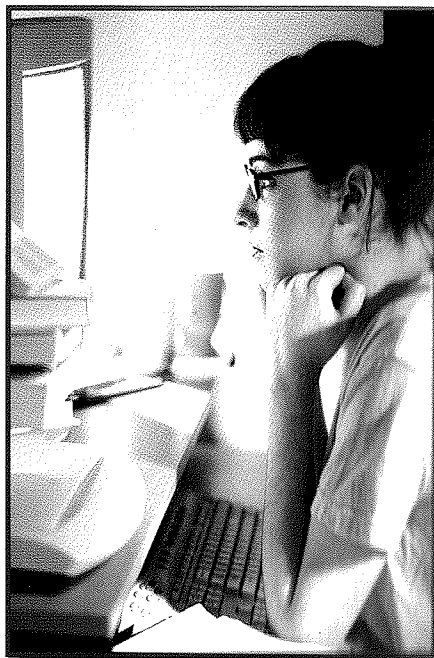

American Physical Society

FREE TO READ is an Open Access initiative of the American Physical Society (APS). Via this program, anyone (authors, readers, institutions, funding agencies, etc.) may, by paying a one-time fee, make articles published in *Physical Review A-E*, *Physical Review Letters*, and *Reviews of Modern Physics* available to all readers at no cost and without a

subscription. Readers will have access to the PDF and postscript versions of the **FREE TO READ** articles through the APS online journals.

During the past few years the pricing of APS journals has been guided by the mission of APS to “advance and diffuse the knowledge of physics,” and the desire to create an equitable sharing of the cost of publishing the physics literature between the larger research institutions and smaller schools. **FREE TO READ** serves both of these by, first, allowing anyone (individuals, institutions, funding agencies, etc.), through the payment of a one-time fee, to make articles widely available outside the usual subscription model, and, second, by

applying any initial modest revenue towards keeping the physics literature accessible to smaller institutions. The additional revenue will allow us to control small institution subscription prices and to experiment with new models for payment by these entities.

The APS is determined to extend every effort to make this model successful and sustainable. With the continued support of authors, funding agencies, and institutions like CERN, the APS believes **FREE TO READ** represents a path by which the journals could gradually transition to full Open Access.

Benefits:

Unlimited

FREE TO READ is not limited to recent publications. Any article or group of articles published in the Journals of the American Physical Society, back to 1893, can be made **FREE TO READ**!

Timeless

Once the one-time fee has been paid, the article will be available without a subscription forever! Even if the program is discontinued by APS, the articles already marked as **FREE TO READ** will remain open to all readers.

"The internet provides information with unprecedented ease. Physics should and must, in my opinion, follow this development by making publications easily and cheaply available to the general public. By the FREE TO READ Open Access initiative the American Physical Society realizes this in a most effective way. As a participant in the initiative the individual scientist pays a fee of the same order of magnitude as the page charge in the old days. But the benefit for the general public is much larger. I enthusiastically support the FREE TO READ initiative."

Dr. Jeppe C. Dyre
Roskilde University

"A very large number of scientists are located in parts of the world where scientific journals are not easily accessible. Thus, it is important to allow these many scientists open access to the scientific literature."

Prof. Franco Nori
University of Michigan and RIKEN

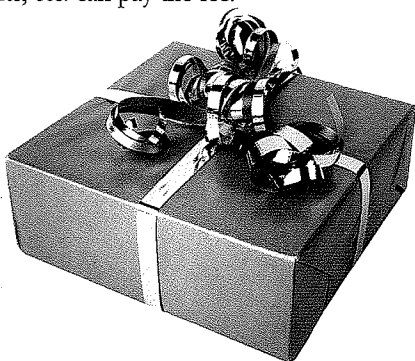

The Gift That Keeps On Giving!

Looking for the perfect gift for all occasions? Make any article **FREE TO READ!** Anyone can pay to make an article accessible to all readers. Authors, readers, institutions, funding agencies, parents, grandparents, etc. can pay the fee.

Need the perfect gift to honor your Department Chair at his Retirement Party? His graduate students and faculty members can join together to pay to make all his articles published in *Physical Review*, *Physical Review Letters* or *Reviews of Modern Physics* **FREE TO READ.**

Another idea is to present this gift to a distinguished researcher at his Symposium Celebration!

This gift honors the researcher but it also provides an important educational resource to individuals who reside in developing countries and don't have access to the scientific literature.

Prices

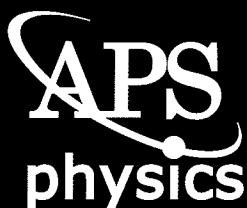

Physical Review A-E	\$975
Physical Review Letters	\$1300

- Articles published in the Reviews of Modern Physics will be considered on a case-by-case basis by special arrangement. Please email assocpub@aps.org for a price quote.
- Download payment form at:
http://forms.aps.org/author/Free2Read_2.pdf
