### Quantum qubits are all talk

Wednesday 6 November 2002

#### Quantum qubits are all talk Steve Bush

Qubits in as-yet-unmade quantum computers will be able to talk to one another says the University of Michigan.

"We have proposed a way to solve a central problem in quantum computing - how to select two qubits, among very many, and make them interact with each other, even though they might not be nearest neighbours, as well as how to perform efficient quantum computing operations with them," said researcher Franco Nori.
