

Quantum information processing, quantum hybrid circuits, superconducting qubits

Objective

Achieving a better understanding of quantum information processing, quantum hybrid circuits, superconducting qubits, quantum simulators, opto-mechanics, and related systems.

Summary of Research Activities

- We have performed research on various aspects of quantum information processing, quantum hybrid circuits, superconducting qubits, quantum simulators, opto-mechanics, and related systems.
- These interdisciplinary studies often involve hybrid structures; e.g., superconductors and semiconductors, photons and electrons, or various (electromagnetic and/or mechanical) resonators coupled to other quantum systems and exchanging energy with them.
- Electronics, photonics, hybrid systems, and quantum information processing are overarching themes in our research.
